Welcome

QuBX Consulting is an international consultancy focused on strategic planning, modeling and implementing operational support systems (OSS) and business support systems (BSS) for telecommunications companies worldwide. Founded in 1991, the company is at the forefront of the global telecom surge maintaining offices in the United States, Europe and Latin America. Leveraging valuable industry experiences, we continue to expand into new services, segments and geographies, creating unparalleled results for our clients.

Industry Experience

With QuBX, you have the advantage of only working with senior-level professionals throughout your project. All our consultants come from carrier and OSS/BSS system vendors and have at least five years of worldwide telecommunications experience. This allows you to direct your assets towards achieving results not training inexperienced resources. And, it means that you will get solutions based on hands-on experience, not entry-level guesswork.

Value-Added Benefits

At QuBX we are driven to constantly look at how we can provide enhanced value to our customers. As a result, we have leveraged our years of experience and know-how into a set of valuable products and tools that allow us to complete projects in shortened time frames, be more cost effective and access our collective knowledge in a more focused manner. These are not cookie-cutter answers or strict methodologies. These tools allow us to quickly combine your unique requirements into a solution set based on global experiences and current states of the art approaches. Plus, we are continually updating our products to incorporate new trends in the industry, impact from new technologies and services, as well as an understanding of new vendors and products.

Biased Solutions

QuBX makes recommendations that are customized to your business. We listen and ask questions to understand your goals, constraints and environment. We then utilize our in-depth understanding of multiple technologies as well as operational and business experiences to give you the right response. Driven by objective evaluation and risk mitigation, you are guaranteed solutions that are focused on what is best for your company. Though every member of our team has the industry background and experience to work effectively with vendors and integrators, our recommendations remain completely unbiased. Unreliable information, untested solutions, exaggerated claims and vendor influences never come into play.

Minimizing Risk

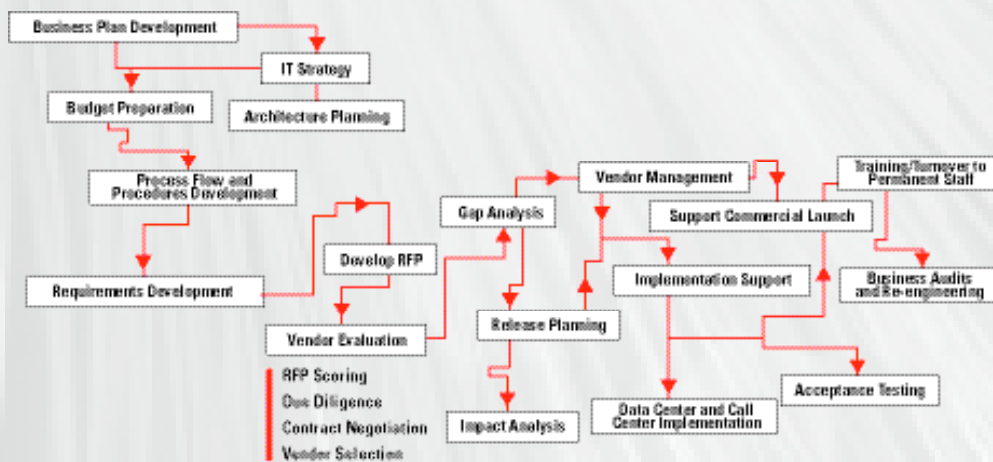

Minimizing risk is vital to the success of any project, so we make it a top priority. At QuBX we reduce risk by clearly defining deliverables and assuming accountability for timelines and budgets. That means we are milestone driven and will tell you what our approach is up front, provide you with measurable activities, plus monitor tasks, resources and all third parties involved. Then, throughout the project, we will pass the knowledge and skills on to you, reinforcing your ability to maintain the solution without us.
